8.2 Exposure controls

Personal protective equipment

General protective and hygienic measures: Keep away from foodstuffs, beverages and food.
 Do not inhale gases / fumes / aerosols.
 Avoid close or long term contact with the skin.
 Avoid contact with the eyes.
 Wash hands during breaks and at the end of the work.

Breathing equipment: If all workplace limits are observed and good ventilation is ensured, no special precautions necessary.

Protection of hands: Protective gloves. The glove material has to be impermeable and resistant to the product / the substance / the preparation.
 Selection of the glove material on consideration of the penetration times, rates of diffusion and the degradation.
 Check the permeability prior to each new use of the glove.
 To avoid skin problems reduce the wearing of gloves to the required minimum. Due to missing tests no recommendation to the glove material can be given for the product / the preparation / the chemical mixture.

Material of gloves: The selection of the suitable gloves does not only depend on the material but also on further marks of quality varies from manufacturer to manufacturer. As the product is a preparation of several substances, the resistance of the glove material cannot be calculated in advance and has therefore to be checked prior to the application.

Penetration time of the glove: The exact breakthrough time has to be found out by the manufacturer of the protective gloves and has to be observed.
